Introduction

As soon as the browser wars ended after two decades of platform competitions, the winner of the browser wars, Chrome, shifted their strategy to prioritize security over product innovation, which was previously driven by 3rd party extensions. The party for extension developers is over, and it'll stay as it is, as elaborated in the market chapter of this document.

A group of people feeling frustrated during this shift is, power users. The people who access information and use tools for communication and productivity mainly using web browsers. Their work happens inside the web browser, and it's important to utilize their web browser, to remove all the frictions.

This web browser project aims to be tailored particularly for this group of users; it aims to rethink web browser with opinionated defaults and builtin features, designed and built end-to-end for particularly for this user group by delegating all the platform complexity to existing browser backends, such as Chromium.

Request Access

We'd like to share the full document with only the private beta group. By joining the private beta group, you'll have chance to;

- You'll have access to first prototype and have the chance to try Gezi first!
- Be in the execution loop of this project from beginning
- Your feedback will influence decision making directly
